

# FUSION

Guitar players have long searched for an instrument that would combine the light string tension and percussive attack of a Les Paul with the overall brighter sound of a bolt-on neck guitar. Our answer to this quest is the Fusion Series of guitars. All Fusion Series guitars have a slightly reduced scale length, which gives these guitars their light string tension and percussive attack, and because they are bolt-on necks, they have that brighter overall sound. This combination has become so popular among today's players that we offer a very comprehensive range of Fusion Series Models with different body woods and pickup configurations.

The Fusion XL and Standard Models use our J-85 blade pickup in the bridge position for extremely hot and harmonically rich tonality. The middle and neck positions use J-200R hum-cancelling rail pickups for low noise and high output to match the high gain of the J-85 bridge pickup.

DAVE SHARMAN

JACKSON FUSION XL

BODY: Basswood ("Gullion's Flame Thru")  
NECK: Eastern Maple
